

Classical Magnetic Systems

On the behaviour of macroscopic magnetized moments in dissipative
environments

ELENA VEDMEDENKO, TIM MATTHIES, RASMUS RASCHKE

Student Project
Hamburg, Germany September 2025

Preface

This document contains my work in regard to the magnetospin effect, first discribed by Dr. Elena Vedmedenko, who proposed this topic to me, and Tim Matthies, who already conducted foundational investigations. My goal is to derive an accurate mathematical description of this effect, leading to accurate computational simulations of the discribed systems.

Contents

Preface	i
1 Mathematical Introduction	1
2 Magnetic Incline System	3

CHAPTER ONE

Mathematical Introduction

We start by giving a short introduction to the necessary mathematical background for this project.

CHAPTER TWO

Magnetic Incline System
